

CANADIAN TROOPS PLAYED AN IMPORTANT ROLE IN THE INVASION OF SOUTHERN EUROPE

ALLIED HEADQUARTERS, ALGERIA

The role of Canadian troops in the southern phase of the invasion of Europe by the fall of Naples.

It is 12 weeks since our invasion troops, including General Simonds' First division and the Tank brigade moved into Sicily directly off ships which had sailed from British ports on the beaches. In one sense the Canadian troops were grateful at that time.

They moved into the big league, in which their companions were seasoned veterans in the African fight.

Following the 8th Army, with nearly a year of successful campaigning, all the way from the Nile through Libya, the western desert, and Tunisia. The 8th had the benefit of a magnificent ground, against which the Canadians were fighting.

In such formations. They were a timely help in spirit and in the first great successful attack for the Allies have produced in this war.

No army remains in the front line, new formations. New personnel and formations are constantly added as the fall of war has effect.

Into this highly-gained, smoothly-running war machine our Canadians were helped right off shipboard less than three months ago.

Most of all the veterans of the 8th Army, could have been blamed before that for wondering what the Canadians would do.

All the world knows how the Canadians climbed in Italy and more than the veterans of the 8th Army appreciate the role of the Canadians in the Italian campaign.

The facts are that the Canadians have fought like troops with plenty of spirit and guts and great courage. They have useful special qualities although at no time have they been the main reason for the success.

They have found themselves added to the great army and the first worked out their part in all the.

The Canadians were then chosen to make small initial landings, and successfully made the first bridgehead on continental Europe.

They have been fighting all over southern Italy, clipping off bits by the hundreds doing their job with the best of them.

It is a battle they have not had to fight in the past, but they have been able to carry the oil to storage tanks.

NORMAN OIL WELLS

Field Norman Field No. 1 Wells Than Was Expected.

NORMAN WELLS, N.W.—The men of Norman Wells are making quiet preparations for the day when they come into the oil.

That's the day when they will turn on the tap and send the rich crude oil surging from beneath the earth's crust across 600 miles of wilderness for shipment at Whitehorse, Yukon Territory. The oil is there. It only awaits completion of the pipeline to start its long journey.

How much oil is there at Norman Wells? That's a question to which all experts themselves would like the answer. P. W. Lambricht, project manager, and W. L. Taylor, superintendent, estimate they can keep the pipeline filled to capacity for six years, but won't go beyond that.

But Dr. L. A. Lauder, head of the geological department at the University of Toronto, who was in the province last summer, says the Norman field is "much larger than expected" and predicts that long day it will be "like Oklahoma in its heyday."

The immediate problem remains getting the oil to Whitehorse and the line must be completed, then the oil can be shipped north with all the difficulties of the sub-Arctic atmosphere. All the remain field enough for the line to be completed.

Technicians here, on Norman oil, has a much lower pour-point—10 degrees below zero—than the oil. However, its stickiness increases at 10 below and experts admit that the oil is a problem.

It is a problem, but the nature of the oil goes much better than the oil's own kind.

At present only two or three wells are being drilled, but up to 100 may be required for the oil to be pumped out.

Planning Next Blow At Germans In Italy

Believed To Have Attained A Speed Of 80 Miles An Hour

A U.S. FIGHTER BASE, where in England—Liaison Robert H. Knapp of Norwich, N.Y., was believed to have achieved a speed of approximately 80 miles per hour in a day during an airfight over Emden, Germany.

If true, then Knapp, pilot of a Thunderbolt fighter which helped to force heavy bombers to raid the German city, probably has flown faster than any human being ever has travelled before.

Authorities do not explain how they arrived at the estimate of his speed, however, but the greatest speed previously officially reported by the pilot of a fighter plane was that of Col. Clarence H. Tamm, who flew a P-51 Mustang, though, only the 8th Air Force fighter plane, which was reported to have flown "more than 780 miles an hour," which is the speed of sound in a test flight in England last spring.

LONDON—The City of London report of airmen decided Sir Frank John Newman-Smith at last made a one-year term. Sir Frank, a stockbroker, succeeds Sir Samuel Joseph.

LARGE HONEY CROTTAWA—The 1943 honey crop is the latest estimate by the Dominion bureau of statistics at 25,000,000 pounds—one of the best on record. It exceeds the 1942 crop which was 23,100,000. Prairie province production totals 14,000,000 compared with the 1942 figure of 12,000,000 pounds.

OTTAWA—A competitive offer of triumph came from the provinces as the federal agriculture department announced the increase in log marketales. Officials said that in 1942 when the British quota was 60,000,000 pounds.

OTTAWA—An external affairs department source said that arrangements for communicating with Canadian returning on the British line Orphanos in an exchange of relations between Canada and Japan are being made.

OTTAWA—The Canadian government will be advised in due course by circular letter and through the press of the big drive against Hitler, that they can wholly support their fight.

OTTAWA—At least one passenger of Trans-Canada Airlines appreciates the service received on a recent trip he wrote on a card.

OTTAWA—The federal government has announced a new measure reserving to the crown in right of Canada all radiative stations which may occur in minerals found in the Yukon and Northwest Territories. The orders were published in the Canada gazette and regulations.

NOT DIFFICULT

Future, World Peace Could Be Assured By Allied Nations

LONDON—Looking forward to the British-American-Russian tripartite conference of foreign ministers, Anthony Eden, British foreign secretary, advocated international practice rather than by the great powers for a future world order.

Addressing a national conference of 6,000 women called by the government, Eden said:

"Once an agreement between the British Commonwealth, the Soviet Union, the United States and China, any scheme for regional organizations, security systems and so forth can be worked out with the greatest of ease."

He declared that without agreement between the four powers "not one of these projects" is likely to be given the practical position.

In welcoming the forthcoming conference, Eden said:

"I hope that one task that that meeting will be to examine and to decide upon methods for joint collection and action between all in peace as well as in war."

The foundation on which the foreign policy must be built, he continued, is the strengthening of the Commonwealth of Nations and a natural association with the United States, Russia and China, and the association of other states such as France with the United Nations.
